

Nevada Housing Affordability Crosstabs

Sample of 1,000 Nevada registered voters. Crosstabs are unweighted because no survey weight variable was included in the raw data file. Results should therefore be interpreted as directional estimates rather than fully representative population estimates. Crosstabs examine differences in housing attitudes across age, party registration, homeownership status, race, gender, and education.

	Gender			Party Identification			Race					Education			
	All	Male	Female	D	R	I	White	Hispanic	Black	Asian	Other	College graduate	High school	Postgraduate	College
n	n=1000	n=449	n=551	n=374	n=253	n=373	n=485	n=269	n=108	n=67	n=71	n=350	n=200	n=166	n=284
Female	55%	0%	100%	60%	54%	51%	56%	55%	54%	48%	61%	54%	56%	55%	55%
Male	45%	100%	0%	40%	46%	49%	44%	45%	46%	52%	39%	46%	44%	45%	45%

D = Democratic

R = Republican

I = Indenpendent/Other

These crosstabs examine how housing attitudes vary across key demographic and political groups, including age, party registration, homeownership status, race, gender, and education. The selected cuts were chosen to identify the coalitions most supportive or opposed to major housing policies and to better understand how economic position, generation, and political identity shape views on housing affordability and development tradeoffs.

Housing Cost Seriousness	All	Age 18-34	Age 35-49	Age 50-64	Age 65+
n	n=1000	n=390	n=255	n=214	n=141
Very serious	64%	71%	62%	64%	48%
Somewhat serious	31%	26%	34%	28%	46%
Not too serious	5%	3%	5%	8%	6%
Not at all serious	0%	0%	0%	0%	0%

Rent Increase Limits by Homeownership	All	Own	Rent	Other arrangement
